SDP INLINE MIXERS

Application

The casing is similar to a casing of a centrifugal pump, it houses the stator and the rotor. It is characteristed by a high shear due to and adjusted tolerance between the rotor and stator.

The product is suctioned throught the inlet and the rotor pushes it to the stator. Passing throught the slots of the stator the product is mechanically sheared, the particles are sheared. If is viscosity of the product is higher than 200cP, it is recommended to put an auxiliary.

Operation

The casing is similar to a casing of a centrifugal pump, it houses the stator and the rotor. It is characteristed by a high shear due to and adjusted tolerance between the rotor and stator.

The product is suctioned throught the inlet and the rotor pushes it to the stator. Passing throught the slots of the stator the product is mechanically sheared, the particles are sheared. If is viscosity of the product is higher than 200cP, it is recommended to put an auxiliary.

Options

Disintegrating head. Fine screen head. Cooled or pressurised mechanical seal. Connections: DIN 11851, SMS, flanges, etc: Baseplate with antivibration legs. Trolley with/without control panel. Mirror polish Ra \leq 0.5 μ m for the pharmaceutical applications. Other motor protections.

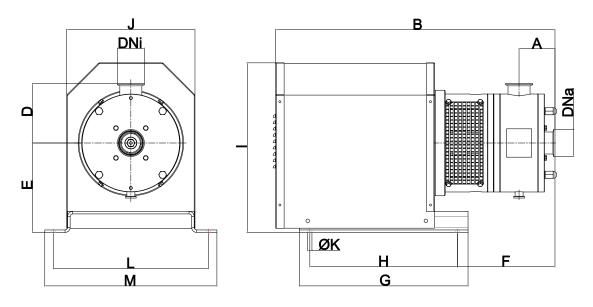

User Benefits

Fast and homogenous powder dissolving A combination of a stationary inline Powder-liquid mixer and a pump High dynamic shear, gentle mixing easy maintenance Reduced installation, emissions, energy and maintenance costs. Reduced total cost ownership Combining the functions of Powder mixing and pumping into a single unit
